About Rick

Rick is a seasoned cybersecurity and intelligence leader with nearly two decades of experience defending critical infrastructure and guiding organizations through complex cyber and operational threats. He has led national efforts focused on threat intelligence, forensic analysis, threat hunting, and the identification of nation-state and criminal cyber actors targeting energy systems, financial networks, operational technologies, and other high-value assets.

He spearheaded development of federal partnership and technical efforts for the New England Utility Cybersecurity Integration Collaborative (NEUCIC)—a pioneering public-private initiative that enhances regional cyber defense of the electric grid, gas pipelines, and broader energy infrastructure. His leadership helped unite utility operators, government agencies, and private-sector stakeholders around shared threat detection, risk mitigation, and resilience strategies.

Rick brings over 19 years of federal service where he supported the protection of state, local, and private-sector networks across critical infrastructure sectors. His work included delivering actionable cyber threat intelligence, advising executive leadership on effective protective measures, facilitating interagency coordination, and advancing resilience planning aligned with national strategies.

Rick holds a Master of Science in Strategic Intelligence from the National Intelligence University, a Certificate in Legislative Studies from Georgetown University, and a Bachelor's degree from the University of Massachusetts Boston. His technical credentials include Certified Information Systems Security Professional (CISSP), Certified Ethical Hacker (CEH), GIAC Certified Incident Handler (GCIH), GIAC Certified Threat Intelligence (GCTI), and SANS Lethal Forensicator designations. He also serves on the GIAC Advisory Board.

At Summit, Rick leads our Cybersecurity & Intelligence solutions—delivering mission-ready support through strategic advisement, threat-informed policy development, and technical defense solutions aligned with today's most complex risk environments.
